Certifications

ISC2 CC – Certified in Cybersecurity
Cisco NetAcad – Networking Basics

Security Training

TryHackMe – Top 5% Global
80+ rooms across SOC Level 1, Jr Penetration Tester, Pre Security, Security Engineer, and Network Security learning paths

Technical Skills

Cloud
AWS, GCP, Oracle Cloud

IaC & Automation
Terraform, Docker, GitHub Actions CI/CD

Security
SIEM (ELK, Snort), IAM/RBAC least-privilege design, malware analysis, threat detection & response

Systems & Scripting
Linux administration, Python (applied), Bash

Networking
TCP/IP, DNS, TLS/SSL, SSH

Observability
Grafana

Collaboration
Git, Jira, Agile

Professional Summary

Computer Science (Cybersecurity) graduate based in Warsaw, working across cloud infrastructure automation and defensive security. Builds infrastructure as code (Terraform) across AWS, GCP, and Oracle Cloud, automates CI/CD pipelines, and designs security-first systems – from IAM/RBAC access control to SIEM pipelines and AI-assisted threat detection. ISC2 Certified in Cybersecurity, ranked Top 5% globally on TryHackMe. Combines hands-on engineering with a security-conscious mindset, backed by real projects, not just coursework.

Education

B.S. Computer Science (Cybersecurity)
VIZJA University, Warsaw 2026

Experience

Security Engineer Intern
Khan Bank, Ulaanbaatar *Aug 2025 – Nov 2025*

- Maintained Linux servers and automated monitoring, debugging, and log rotation via Bash scripting.
- Automated manual data-reporting workflows in Python, reducing processing time.
- Collaborated within an Agile/Jira team alongside DevOps engineers, participating in code reviews.

Selected Projects

OCI Autonomous Security Agent (thesis)
- Serverless, event-driven security system on Oracle Cloud combining CIS compliance auto-remediation with an AI-driven threat-detection engine (VirusTotal/NVD enrichment, LLM risk scoring); Grafana dashboards for observability.

IAM-API-V2
- Authentication API (FastAPI) with JWT auth, RBAC, and bcrypt hashing; AWS infrastructure provisioned via Terraform; CI/CD via GitHub Actions; TLS via Caddy.

GCP Serverless API Hub
- Multi-region infrastructure provisioned via Terraform with least-privilege IAM and automated deployment.

ELK + Snort SIEM Setup
- Log aggregation and intrusion-detection pipeline.

CAPEv2-Analysis / WannaCry Sandbox
- Hands-on malware behavior analysis in an isolated environment.
