CYBERSECURITY & CLOUD ENGINEER

PROFESSIONAL SUMMARY

Computer Science engineering student (Expected 2026) and **ISC2 Certified in Cybersecurity (CC)** with hands-on expertise in cloud infrastructure, security operations (SecOps), and DevOps automation. Proven track record of engineering event-driven security tools, deploying full-stack environments via Infrastructure as Code (Terraform), and building comprehensive SIEM pipelines (ELK Stack/Snort). Adept at utilizing Python and Bash to eliminate manual workflows and automate threat detection across AWS, GCP, and Linux environments.

PROFESSIONAL EXPERIENCE

Security Engineer Intern | Khan Bank

Aug 2025 – Nov 2025

- **Process Automation:** Engineered Python scripts to automate manual data reporting pipelines, significantly improving operational efficiency by reducing processing time by 40%.
- **System Maintenance & Scripting:** Managed Linux server environments, executing custom Bash scripts to automate proactive system monitoring, log rotation, and telemetry collection.
- **Cross-Functional Collaboration:** Worked closely with DevOps and engineering teams within a Jira-based Agile environment to troubleshoot system anomalies, escalate issues, and participate in code reviews.

KEY TECHNICAL PROJECTS

AI-Driven Cloud Governance Engine (Diploma Thesis)

- **Architecture:** Engineered a serverless, event-driven security engine on Oracle Cloud (OCI) that intercepts live infrastructure events and evaluates them against Threat Intelligence APIs (VirusTotal, NVD CVE).
- **AI Integration & Automation:** Leveraged Generative AI (Llama 3.1) to analyze complex threat patterns, implementing deterministic fail-safe logic to automatically quarantine or delete malicious payloads based on mathematical risk scoring.

Cloud Infrastructure & DevOps Automation (IaC & CI/CD)

- **Infrastructure as Code (Terraform):** Provisioned highly available, secure-by-design cloud architectures across AWS (EC2, IAM) and GCP (Cloud Run, BigQuery) entirely through Terraform.
- **CI/CD Pipelines:** Built automated deployment pipelines using GitHub Actions that lint code, build Docker images, and push to container registries on every commit.
- **Zero-Downtime Deployments:** Configured Watchtower on cloud VMs to automatically poll registries and execute seamless rolling updates for containerized full-stack applications.

SecOps: SIEM Monitoring & Threat Hunting

- **SIEM Pipeline:** Deployed a complete, containerized Intrusion Detection System and SIEM stack (Snort, Logstash, Elasticsearch, Kibana) to capture network alerts and visualize live traffic patterns.
- **Log Forensics:** Developed a serverless AWS log analysis pipeline with a custom Python regex engine that parsed Apache/Nginx logs, successfully isolating 18 SQLi and XSS attack attempts during testing.
- **Malware Analysis:** Deployed a CAPEv2 sandbox on Ubuntu with a NAT-isolated Windows 10 guest to conduct behavioral forensics on WannaCry, extracting actionable Indicators of Compromise (IOCs).

EDUCATION & CERTIFICATIONS

ISC2 CC – Certified in Cybersecurity

Active

Validates established knowledge in security operations, access controls, network security, and cloud security principles.

Cisco NetAcad – Networking Basics

Completed

B.S. Engineering – Computer Science (Cybersecurity)

Vizja University, Warsaw

Expected 2026

SKILLS & TECHNOLOGIES

Cloud & Infrastructure: AWS (EC2, S3, Lambda, IAM), GCP (Cloud Run, BigQuery), Oracle Cloud (OCI), Serverless Architecture, Docker.

DevOps & Automation: Terraform (IaC), GitHub Actions (CI/CD), Git, Automated Deployments, Agile/Scrum Methodologies.

Security Operations (SecOps): SIEM (ELK Stack, Splunk), Snort IDS, Threat Hunting, Incident Response, IAM Role-Based Access Control (RBAC), Malware Forensics.

Programming & OS: Python (Advanced Automation/Regex), Bash, SQL, Linux Administration, Windows Security.
